Kasetsart University

Bachelor's degree in Software and Knowledge Engineering

Bangkok, Thailand

10/2027

Projects

SleepEfficiencyPrediction (Streamlit)

04/2025

A full-stack web application and API that predicts sleep efficiency and provides access to users' sleep information. It combines sensor data (like temperature, humidity, and heartbeat)

UniPlus (Django Web App)

12/2025

a comprehensive university event management platform built with Django and Next.js that enables discovery and register for events while providing organizers with tools to create events, manage registrations, and track attendance through QR code scanning

Tactical-Hero-Battle-Game (Python)

05/2025

A 2D side-scrolling tactical strategy game built with Python that combines tower defense mechanics inspired by Line Ranger and Battle Cats designed with OOP Principals in place.

Fruits Anomaly Detector (Cira-core)

02/2022

An Ai Deep trained by me to detect if the fruit on a conveyor belt has bruises or anomalies in order to separate the fruits, meant to be used in farms or factories in order to maximize speed in separation without man power

Chess Haven (Shopify Web App)

01/2023

a fully functional e-commerce store on Shopify used for selling custom Chess sets, implementing custom product catalogs, payment processing, and inventory management systems

Cotour Jerdan (Shopify Web App)

11/2024

a fully functional e-commerce store on Shopify used for selling luxury furniture, implementing custom product catalogs, payment processing, and inventory management systems

Maze Escape (C++, Blueprints, Unreal)

08/2021

3D horror maze puzzle built with UE4 working as a functional Demo

MoleDiver (Kotlin)

04/2026

Mole Diver is a mobile game developed as part of a university course project.

RickFolio (React)

04/2026

RickFolio is a full-stack, role-based resume portfolio platform
